

| Key Insights from ASER Data

- Math performance is ~20 percentage points lower than reading for Grade 5 students
- Bihar and Uttar Pradesh lag behind top-performing states by ~20–30 percentage points
- Reading performance has improved from 2018–2024, but math progress is slower
- Many students remain at basic math levels even in higher grades

Problem Statement

Education officers (DEOs) lack a real-time system to identify weak regions and take timely action on learning gaps.

| Learning Gap Intelligence System (LGIS)

What it is

A data-driven dashboard and alert system to help education officers identify and act on learning gaps.

Core Features

- Interactive dashboard (state, grade, skill filters)
- Risk alerts for low-performing regions
- School ranking and performance tracking
- AI-based recommendations for interventions

Users

- District Education Officers
- School Administrators

| AI & Impact

AI Use Cases

- Identify at-risk regions using trend analysis
- Recommend targeted interventions
- Generate automated performance reports

Success Metrics

- Increase in math proficiency rates
- Reduction in students at basic levels
- Improved state-level performance gaps

Final Note

This solution works because it converts static ASER data into actionable insights for faster and targeted decision-making.
